Executive Summary

On 25 June 2026, RFI-IRFOS performed static analysis of the production Write 123 Android application, a preschool educational app teaching numbers and letter tracing to children, and identified one CRITICAL finding: a full advertising SDK stack, Google Ads, Unity, ironSource, and Vungle, combined with ACCESS_ADSERVICES_AD_ID and ACCESS_ADSERVICES_ATTRIBUTION permissions and Firebase's auto-initialization provider, all initializing before any consent screen is shown to the user.

Across thirteen written notices over ninety days, cc'd to the Austrian Datenschutzbehoerde and the European Data Protection Supervisor from the fourth notice onward and CERT.at from the ninth, not one reply of any kind, automated or human, was ever received from Super Four Games LLP at any of the three addresses used. None of RFI-IRFOS's three standing questions, on awareness of the advertising stack's presence, whether verifiable parental consent under Art. 8 is obtained before any advertising SDK or Firebase initializes, or whether remediation would occur before or after regulator contact, ever received an answer.

Scope: Static analysis of the publicly downloaded production Write 123 Android APK (v4.4), on an authorized test device, only. No Super Four Games account, backend, or infrastructure was accessed or tested.

Disposition

R1 sent 25 June 2026 to support@super4games.com, superfourgames@gmail.com, and todsplaygames@gmail.com, cc the Austrian Datenschutzbehoerde and the European Data Protection Supervisor from the fourth notice onward. Across thirteen written notices over ninety days, not one reply of any kind, automated or human, was ever received from Super Four Games LLP.

ID	Severity	Title
C1	CRITICAL	Full advertising stack and advertising-identifier collection auto-initializing before consent on a preschool app

Subject & Operator Analysis

Super Four Games LLP is a UK-registered limited liability partnership, listed in correspondence c/o Chhabi Mitra, operating the Write 123 preschool educational app.

Findings

C1: Full advertising stack and advertising-identifier collection auto-initializing before consent on a preschool app

HIGH, CVSS v4.0 AV:N/AC:L/AT:N/PR:N/UI:N/VC:H/VI:N/VA:N/SC:N/SI:N/SA:N, 8.7

The app bundles Google Ads, Unity, ironSource, and Vungle advertising SDKs, alongside ACCESS_ADSERVICES_AD_ID and ACCESS_ADSERVICES_ATTRIBUTION permissions. Firebase's auto-initialization provider runs before any consent screen is presented.

No reply of any kind, across thirteen notices, addressed whether verifiable parental consent under Art. 8 is obtained before any of this initializes for a child user.

Impact: A preschool app initializes a full advertising and identifier-collection stack before any consent decision can be made, on an audience below the age at which meaningful consent is legally possible for the child themselves.

Fix: Gate all advertising SDK and Firebase initialization behind a verifiable parental-consent mechanism, or remove the advertising stack entirely from a preschool-targeted product.

Thirteen Notices, Three Addresses, Zero Replies

Across thirteen written notices sent over ninety days to three separate addresses, support@super4games.com, superfourgames@gmail.com, and todsplaygames@gmail.com, not one reply of any kind, automated or human, was ever received. A separate targeted search of the mailbox for any inbound message from these addresses or associated with the developer's name returned zero results.

Data Protection, Article by Article

Finding	Provision	Concern
C1	GDPR Art. 8, Art. 6(1)	Pre-consent advertising and identifier-collection stack on a preschool app

Disclosure Timeline & Outcome

Date	Event
2026-06-25	R1 sent to three addresses; 1 CRITICAL finding; three standing questions posed
2026-07-03	Follow-up adds the Austrian DSB and EDPS to cc for the first time
2026-08-12	Follow-up, day 48, CERT.at added to cc
2026-09-03	Follow-up, seventy days silence
2026-09-11	Follow-up, seventy-eight days, zero replies, embargo eight days out, weekly binary-diff monitoring disclosed
2026-09-19	Embargo, as stated identically throughout the correspondence, closes and this report publishes

Residual Risk & Recommendations

- Establish a functioning contact address capable of receiving and responding to GDPR disclosures.
- Gate all advertising SDK and Firebase initialization behind a verifiable parental-consent mechanism.
- Consider removing the advertising stack entirely from a preschool-targeted product.
