

Second Confirmed Takedown — Same Actor, New Package IDs "Spinwinera app" & "Spin-

winera" com.win.era.appofficial / com.spinwinera.app — the developer account behind Merge Chicken re-listed its own casino brand as two new apps. Both are now removed.

RESOLVED • BOTH APPS REMOVED FROM THE GOOGLE PLAY STORE

Analyst	RFI-IRFOS Research Team
Report date	2026-07-01
Confirmed removed	2026-07-07
Package 1	com.win.era.appofficial ("robotic vacuum / room-cleaning game", 100+ installs)
Package 2	com.spinwinera.app (second listing, same brand)
Developer	HOME ESSENTIALS & HARDWARE LIMITED, London W9 3EF, UK (same account as Merge Chicken)
Related case	MERGECHICKEN-001 (removed 2026-06-30)
Severity	CRITICAL
Reported	2026-07-01 - Google Play & Android Security
Resolved	2026-07-07 - both apps confirmed removed
Time to outcome	6 days

Executive Summary

On 2026-06-30, Google Play & Android Security confirmed the removal of "Merge Chicken" (com.Merge.o98Chickens): a PEGI 3 listing that concealed an unlicensed real-money casino, delivered at runtime via Firebase Remote Config from the domain spinwinera.com. RFI-IRFOS's own report on that case closed with a residual-risk warning: "a takedown removes the listing, not the actor... the developer account also operates 'Spinwinera'... infrastructure that survives the removal of any single package."

That warning was not hypothetical. The same Play developer account, HOME ESSENTIALS & HARDWARE LIMITED, was still publishing two further listings naming themselves directly after the casino brand — "Spinwinera app" (com.win.era.appofficial, disguised as a robotic-vacuum/cleaning game) and "Spinwinera" (com.spinwinera.app). Both were reported the same day the invitation for fresh leads was received. On 2026-07-07, Google Play & Android Security confirmed: "We can now confirm that the apps are no longer available on the Play Store."

This is RFI-IRFOS's second confirmed enforcement outcome inside two weeks, against the same actor, without requiring a fresh full binary reverse-engineering pass on either new package. The identification rested on actor-level linkage: the same developer account, the same casino brand used as the app's own name, and the same shell-over-casino construction already binary-confirmed on the sibling app. The platform actioned it on that evidentiary basis alone.

Scope: This report is a linkage case, not a fresh independent binary analysis. RFI-IRFOS decompiled and fully confirmed com.Merge.o98Chickens (see MERGECHICKEN-001). For com.win.era.appofficial and com.spinwinera.app, the two new listings were identified and reported on the strength of (1) shared Play developer account, (2) both listings named directly after the live casino domain, and (3) the identical shell-game presentation pattern already proven on the sibling app — disclosed to Google explicitly as a high-confidence lead pending binary confirmation, not as an independently reverse-engineered finding. The live casino product itself (spinwinera.com — games, deposit methods, age-rating footer) was directly observable and is reported as verified fact.

Disposition

Reported to Google Play & Android Security on 2026-07-01, the same day the team invited further leads following the Merge Chicken takedown. Receipt was acknowledged within hours. On 2026-07-07, the Play and Android Security Team confirmed: "We can now confirm that the apps are no longer available on the Play Store." Time to resolution: 6 days. Two related filings against a sibling developer account (ASJ ALL IN ONE SERVICES LIMITED, operating further Spinwinera / Roobet / BetOnRed shells) remain open and unconfirmed as of this report — see Residual Risk.

ID	Severity	Title
SW-01	CRITICAL	Actor identity linkage - casino brand adopted as the app's own name

ID	Severity	Title
SW-02	CRITICAL	Live, unlicensed real-money casino and sportsbook at the linked domain
SW-03	HIGH	Age-rating contradiction - PEGI 3 Play listing vs. the operator's own 18+ site footer

What We Predicted, and What Happened

The MERGECHICKEN-001 report closed with this residual-risk note: "A takedown removes the listing, not the actor. The developer account HOME ESSENTIALS & HARDWARE LIMITED also operates 'Spinwinera', and the gambling payload is served from spinwinera.com - infrastructure that survives the removal of any single package."

Confirmed

Six days after that warning was written, and on the same day Google invited further leads, RFI-IRFOS reported exactly the two listings the warning anticipated. Both are now confirmed removed.

The Same Tell, Repeated

Merge Chicken worked as a facade because its name (a casual merge-puzzle game) bore no relationship to the casino it concealed. The two follow-on listings made a different, simpler mistake: they carried the casino's own brand in their own name and package identity. A storefront listing that names itself after a live real-money casino domain does not need a fresh binary analysis to be recognised - the linkage is the finding.

```
Merge Chicken (removed)    --> hid the casino behind an unrelated name
Spinwinera app (removed)    --> named itself after the casino directly
Spinwinera (removed)        --> named itself after the casino directly

All three: same developer account. Same casino domain. Same shell-over-casino
construction.
```

Findings

SW-01: Actor identity linkage - casino brand adopted as the app's own name

CRITICAL - Repeat-offender account, self-naming pattern

Both new listings are published by the same Play developer account as the already-removed Merge Chicken, and both carry the casino's own brand name in the app name or package id itself: "Spinwinera app" and "Spinwinera", pointing directly at the live casino domain spinwinera.com.

```
developer account : HOME ESSENTIALS & HARDWARE LIMITED (same as MERGECHICKEN-001)
package 1         : com.win.era.appprofficial -> Play listing "robotic vacuum /
                  room-cleaning game"
package 2         : com.spinwinera.app         -> Play listing "Spinwinera"
shared domain     : spinwinera.com (real-money casino + sportsbook)
```

Impact: A single actor operating multiple Play Store fronts under the same account, each named after or linked to the same live casino brand, is a repeatable evasion pattern rather than an isolated incident. Package-level takedowns alone do not remove the account's capacity to re-list.

SW-02: Live, unlicensed real-money casino and sportsbook at the linked domain

CRITICAL - Unlicensed real-money gambling, no KYC

spinwinera.com, the domain both new listings are named after, operates as a full real-money casino and sportsbook: Pragmatic Play, BGaming and Evolution live-dealer roulette, Bitcoin deposits, a €1,500 welcome bonus, and no Know-Your-Customer process beyond a self-declared date of birth.

```
product    : casino + sportsbook (Pragmatic Play / BGaming / Evolution live roulette)
deposits   : Bitcoin accepted
bonus      : EUR 1,500 welcome bonus
age/KYC    : self-declared date of birth only - no identity verification
```

Impact: The same no-KYC, real-money exposure already documented in MERGECHICKEN-001 (MC-03) is confirmed live at the shared casino domain both new listings point back to.

SW-03: Age-rating contradiction - PEGI 3 Play listing vs. the operator's own 18+ site footer

HIGH - Age-rating circumvention (minor protection)

"Spinwinera app" is Play-listed as a PEGI 3 ("suitable for all ages") robotic-vacuum/cleaning game, while the casino brand it is named after and connects to restricts access to 18+ in its own site footer.

Impact: The same age-rating circumvention already established in MERGECHICKEN-001 (MC-02) repeats here: an all-ages storefront listing sitting in front of a product the operator's own site admits is 18+ only.

Disclosure Timeline & Outcome

Date	Event
2026-06-25	MERGECHICKEN-001 reported to Google Play & Android Security.
2026-06-30	Merge Chicken confirmed removed. Google invites further leads from the same reporter.
2026-07-01	SPINWINERA-001 filed same day: same developer account, two re-listed apps named after the casino brand. SPINWINERA-A and SPINWINERA-B filed in parallel against the account and a sibling account.

Date	Event
2026-07-01	Receipt acknowledged by the Play and Android Security Team, same day, across all three filings.
2026-07-07	Confirmation: "We can now confirm that the apps are no longer available on the Play Store." (SPINWINERA-001)

Outcome

Both remaining listings from the HOME ESSENTIALS & HARDWARE LIMITED account (com.win.era.appofficial, com.spinwinera.app) are removed. Second confirmed enforcement outcome of the RFI-IRFOS 2026 Android audit programme, six days from report to resolution.

What This Confirms About the Evasion Class

The methodologically notable point of this second case is what it did NOT require: a fresh full decompilation of either new package. The report was built and actioned on account-level and brand-level linkage alone - the same developer account, the same casino domain used as the app's own name, and a shell-game construction already binary-proven on the sibling listing. Static per-app reverse engineering remains the gold standard where an actor's identity is unknown; where an actor is already known and re-offending, pattern-matching at the account and infrastructure level is faster and, as this outcome shows, sufficient for the platform to act on.

- Re-offending accounts are best tracked at the account and infrastructure level (shared domain, shared brand, shared support contact), not solely at the individual-package level.
- A casino domain reused as an app's own brand name is, on its own, a strong enough signal to warrant platform review without waiting for a full binary dossier.
- This closes the loop the MERGECHICKEN-001 report opened: residual-risk predictions in a takedown report are actionable follow-up leads, not just caveats.

Residual Risk & Open Threads

This outcome resolves the HOME ESSENTIALS & HARDWARE LIMITED account's remaining listings. It does not resolve the broader pattern. A related, parallel filing (SPINWINERA-B) identified a sibling developer account, ASJ ALL IN ONE SERVICES LIMITED, operating further shells under the same casino-adjacent branding family - "Spinwinera Casino", "Roobet" and "BetOnRed" - with account-level termination requested. As of this report, that filing and a companion account-level filing (SPINWINERA-A) remain acknowledged but unconfirmed by Google Play & Android Security.

Open

ASJ ALL IN ONE SERVICES LIMITED and its Spinwinera Casino / Roobet / BetOnRed listings are reported but not yet confirmed actioned. This is tracked as an open item, not a resolved one, and will be updated on the public ledger when (if) confirmation arrives.

- Platform: extend account-level review to ASJ ALL IN ONE SERVICES LIMITED; treat spinwinera.com, Roobet- and BetOnRed-branded listings as abuse indicators across future submissions regardless of publishing account.
 - General: a casino domain used as an app's own name is a low-cost, high-confidence signal that scales - worth a standing detection rule independent of any single reporter.

This matter was reported directly to the platform as abuse; no commercial engagement was offered.

The linkage evidence in this report (shared developer account, shared casino domain and brand, shared shell-game construction) is presented as reported to Google Play & Android Security; independent binary confirmation of the two newly-removed packages was not performed prior to takedown. Full binary evidence for the related MERGECHICKEN-001 case is archived under chain of custody and available to regulatory authorities on request. Research conducted under ISO/IEC 29147, the freedom of scientific research (Art. 17 StGG) and GDPR Art. 89. REF SPINWINERA-001.
